I'm talking about the headline featured in the news today, "NASA makes history as first woman succeeds in rocket launch." The mainstream press has been rightly celebrating this historic milestone, and it is true that space has long been dominated by men. The reason for this is the bias against women. It is time to change this bias and give women a greater chance. There are many ways that women are often ignored or put down in today's culture. The facts are that women have contributed greatly to human achievement and are key players in the future of space exploration. Many companies and scientists around the world are doing their best to overcome the barriers for women in the sciences and space. Two great examples of this are the astronauts Sally Ride and Mae Jemison, both of whom are inspiring women. Sally Ride was the first American woman to go into space, and Mae Jemison became the first African-American woman to go into space and the first woman to travel in space without a man. Currently, women account for only 4% of NASA's employees. There are also not enough women in the sciences or in mathematics. We need to encourage more women to choose careers in science and to pursue degrees in these fields. In order to make space exploration more equal for women, we need more information about them and their contributions to society and to the future of humanity. They need to be part of the media's coverage of these events. Many women have had to overcome physical and mental challenges before reaching space, and it would be great to see the media acknowledge their contributions to space travel. In an ideal world, every new astronaut should have a panel of reporters to profile him or her. They also should feature women in the news and news events, such as the recent landing of the Mars rover Spirit. The media should also discuss how women have contributed to 82157476af
